

LETTER OF RECOMMENDATION

Budapest, 20th Sept 2013

To Whom It May Concern,

Timea Szabo was working for BORD Studio between February 7th and September 20th 2013 as a junior architect. During that time she has played a significant role in the successful completion of a wide-variety of projects in Budapest and Debrecen, the largest cities of Hungary.

Above all, she created construction documents on a soccer stadium project: designed suspended ceilings to dispose all the building service engineering systems and low voltage fittings. She also contributed to the interior design plans: drafted sheer-draughts, assisted in material specification and details development with the project architect.

Prior to this she was working on our award-winning entry for a national design competition for the new inter-modal transport hub and city park in Debrecen. Her duty was the implementation of landscape design and the development of space connections between the park and public areas.

Meanwhile she contributed to the schematic design and prepared seating plans for a bank's new headquarter in a top-class monumental building on the riverside of Budapest. She demonstrated her communication and interpersonal skills while participating on client meetings. Due to her job we succeeded to fulfill the personnel seating requirements.

She effectively took part in smaller projects as well: first she assisted to the schematic design of a soccer academy and created site plan options for client representation, then she worked on programming and site planning for a re-use project of an old Tobacco-factory. Furthermore she accomplished the concept design of a 140-unit condo complex by producing floor plans and sections that helped us to develop the most appropriate solution for the client's unique needs.

I affirm that during her tenure at BORD Studio Timea significantly developed her technical and design skills in a decently short time. Due to her profitable capabilities and collaborative team-oriented approach I highly recommend Timea Szabo to be considered as an ideal candidate for architecture firms.

For the record and the appropriate purposes I sign this letter and remain at your disposal to clarify any questions or provide more information.

Yours sincerely,

Peter Bordas
